

Production of bottled water in the Kyrgyz Republic

JSC "Kyrgyzindustry"

Bishkek 2022

Fresh water reserves of Kyrgyzstan

Lakes - 1745 cubic km;
Glaciers - 650 cubic km;
Groundwater - 13 cubic km;
River drains - 52 cubic km;
Renewable water resources - 46 cubic km

The total volume is 2458 cubic km

Glaciers alone hold 20 years of global bottled water consumption

Source of natural glacial water in the National Park "Ala-Archa"

- 2100 meters above sea level
- Water from an ecologically clean, protected area

- Crystal clear and pristine taste
- Living and soft water, the chemical composition practically does not change

- Ideal for daily consumption
- No deposition of mineral salts in the body

Financial potential of the source

The flow rate of the source (water content) is 4320 cubic meters/day or 4.32 million liters/day

Use of 70% of this volume

756 million liters/year

\$225 million/year

Total exports of Kyrgyzstan
\$226 thousand/year

1000 times

Bottled water plant

Compliance with international standard ISO/TS 22002-1:2009 Food safety prerequisite programs. Part 1. Food production"

Plant design according to HACCP principles

Water treatment

Filter system for mechanical water purification

Ultraviolet water disinfection system

Reverse Osmosis Equipment

Water bottling

Bottle Washing-Filling-Capping Integrated Machine

Blow Molding Machine

PET Preform

Blow Drying Machine

Code Ink-jet Machine

Shrink Labeling System

Shrink Wrapping Package Machine
